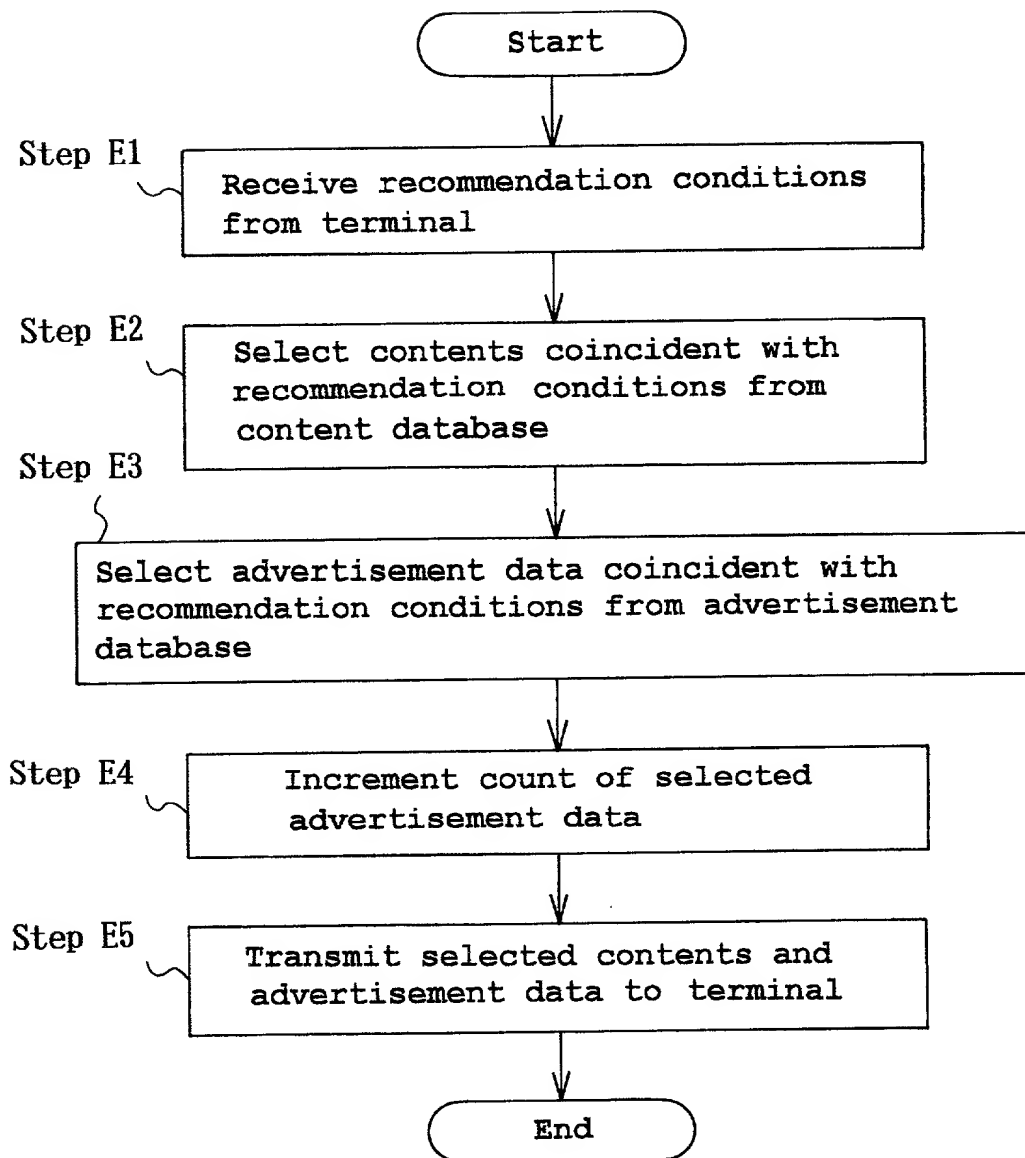

Figure 1 consists of 12 histograms arranged in a 6x2 grid. The columns are labeled 'n=10' and 'n=20'. The rows are labeled 'm=10', 'm=20', 'm=30', 'm=40', 'm=50', and 'm=60'. Each histogram shows the frequency of the number of non-zero elements in the vector x . The x-axis for all histograms is 'Number of non-zero elements' and the y-axis is 'Frequency'. The distributions are roughly bell-shaped and centered around $n/2$. For $n=10$, the distributions are centered around 5, and for $n=20$, they are centered around 10. As m increases, the distributions become narrower and taller.
